“National Pet Dental Health Month”

10% savings on Dental Prophylaxis, Including Anesthesia, Hospitalization and associated blood work. Oral disease is the most frequently diagnosed health problem for pets. An astounding 80 % of dogs and 70 % of cats show signs of oral disease by age three! Symptoms of periodontal disease may include:

- Bad Breath
- Yellow-Brown Crust On Teeth
- Bleeding Gums
- Going to the Food Bowl But Not Eating
- Change of Chewing Habits
- Tooth Loss
- Subdued Behavior/Depression
- Abnormal Drooling
- Dropping Food Out of the Mouth
- Rubbing Mouth

Periodontal dental care is one of the most neglected pet healthcare needs. Effects can result when bacteria enter the bloodstream, including damage to the heart, liver and kidneys. If you suspect any of these symptoms or if we have recommended a dental procedure please call to schedule an appointment today.

Oral disease is the #1 health problem diagnosed in dogs and cats.
